To: Rig Manager AD2

Sir:

I had the pleasure of being one of the Sr. Drilling Site Supervisors who worked Rig AD2 in Thailand for Apico LLC in 2013.

Fortunately I was there for the Rig-up Spud-in and Drilling of the Well to TD in the UBD Mode. As well as participating in the Well Test.

**AD2 being a Cyber land Rig is quite unique.
The Well was drilled successfully to the allowable TD. The Hole was tight so no information on it may be posted.**

Although it may be said that any of the difficulties normally encountered in Exploration Drilling were successfully compromised with the skill of personnel and equipment provided.

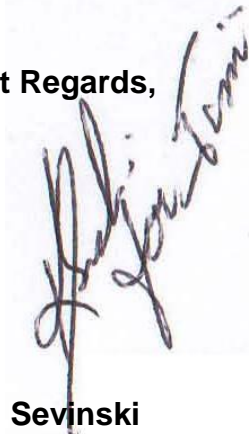

AD2 was made up of a mixture of nationalities that were molded to an efficient Drilling Team. This speaks well of AD2 Management in conjunction with APICO and the respective Service Companies.

The Rig move and Rig-up was done in a professional manner as were events from Spud to TD and subsequent Well Testing.

Although made in China Rig AD2 is of a standard that would most likely be seen in North America. I attribute that to having AD Personnel on site when the Rig was being constructed. Personally I am very satisfied with the way the Rig came together. I have been on a lot of start-ups with new Crews of mixed nationalities both onshore and offshore and AD2's performance is certainly one of the best.

Good-Luck in future endeavors I know AD2 will be a shining Star for Asia Drilling.

Best Regards,
