Attention : U Myo Tin
General Manager

Date: 08 March 2012

Dear Sir,

This letter is to acknowledge that **MPRL E&P** has contracted **Asia Drilling Pte Ltd** ("Asia Drilling") to supply drilling services on several drilling operations at our *Mann Field*, in onshore central Myanmar, using Asia Drilling's Rig **AD-1** in 2007 for a three-well campaign, and Rig **AD-2** in 2011-2012 for a deep deviated well below the *Mann Field*.

Mann Field is notorious for most challenging drilling conditions, including extreme overpressures and mobile shales. Yet in both occurrences, both rigs have managed to drill much faster than the local competition as shown by Rig **AD-2** effectively reaching its intended objective in 6 ½ months in the *Mann Deep East-1* wildcat including four sidetracks as opposed to nine months for a less challenging well by a competitor's similarly rated rig which finally did not reach its intended objective. Rig **AD-1** drilled two infill wells back to back and deepened another one in record time delivering impeccably completed wells, all of which are still in production.

Asia Drilling as a company displayed an impeccable safety record of zero LTI's and LTA's during both operations from rig-up to demobilization. The crews of both rigs are perfectly trained in efficiently using state-of-the-art drilling material, thoroughly maintained and equipped by appropriate spare parts, resulting in an absolute minimum downtime. The drilling personnel showed to be most cooperative and willing to work with the Operator in order to solve rather teething drilling problems in both operations.

MPRL E&P is pleased to recommend Asia Drilling Limited as an efficient, cost-conscious, technology-oriented safe drilling contractor, and wishes Asia Drilling every success in the future.

Cordial regards,

Dr. Eloi Dolivo
Technical Manager
